D.Shamika Hasini		Airline Refund & Cancellation Portal

Abstract

The Airline Refund & Cancellation Portal is a web-based application designed to simplify and automate the process of flight cancellations and refunds for passengers. In the airline industry, refund procedures are often complex, time-consuming, and unclear due to varying fare rules, cancellation policies, and eligibility conditions. Passengers frequently face difficulties in understanding whether they are eligible for a refund, how much amount they will receive, and how long the process will take. This project addresses these challenges by providing a user-friendly, self-service platform that offers transparency and efficiency.

The system allows users to initiate flight cancellations by entering booking details and viewing applicable fare rules. It includes an automated eligibility check based on predefined conditions such as ticket type, cancellation timing, and airline policies. A refund calculation module estimates the refundable amount, giving users clear expectations before submission. Once a request is submitted, users can track the status of their refund through a dedicated status tracker.

Additional features such as notification updates, history of previous requests, and an FAQ section enhance the overall user experience. The application is developed using modern frontend technologies like React.js, HTML5, CSS3, and JavaScript, ensuring responsiveness and interactivity. By integrating REST APIs and efficient state management, the portal delivers a seamless and reliable experience.

Overall, this project improves transparency, reduces manual effort, and demonstrates practical implementation of real-world business logic in web application development.

2. Module Mapping

(Provide details of how modules are divided among team members.)

Module Name	Assigned Roll Number(s)	Signature
-------------	-------------------------	-----------

Cancel Flow	2520080033	
Fare Rules Display	2520080033	
Submit Form	2520080033	
Admin Panel	2520080033	
Email Notification	2520080033	
Eligibility Check	2520030593	
Refund Calculation	2520030593	
Status Tracker	2520030593	
History(localStorage)	2520030593	
FAQ Section	2520030593	

3. Module Details

The project is divided between two team members to ensure balanced workload and clear responsibility across user interface development and core logic implementation.

2520080033 Responsibilities:

This member is responsible for designing and developing the user interface and handling user interactions. The Cancel Flow module involves creating a smooth and intuitive process for users to initiate flight cancellations. In the Fare Rules Display module, relevant policies and conditions are presented clearly to users before cancellation. The Submit Form module includes form creation, input validation, and handling user data submission. API Integration is managed to connect the frontend with backend services using Axios for data exchange. The Admin Panel is developed to allow management of flight and refund-related data. Additionally, the Email Notification module is responsible for triggering alerts or confirmations to users regarding their cancellation and refund status. Overall, this role focuses on frontend structure, responsiveness, and user experience.

2520030593 Responsibilities:

This member focuses on implementing the core business logic and data handling functionalities. The Eligibility Check module determines whether a user qualifies for a refund based on predefined conditions such as fare type and cancellation timing. The Refund Calculation module computes the refundable amount using applicable rules and deductions. The Status Tracker module allows users to monitor the progress of their refund requests. The History module stores and retrieves past transactions using LocalStorage. The FAQ Section provides users with answers to common queries, enhancing usability. This role ensures accurate logic implementation, efficient data management, and smooth functioning of system features.

4. Frameworks / Platforms / Software Used

4. Frameworks / Platforms / Software Used

Frontend:

HTML5, CSS3, JavaScript (ES6+), React.js (Hooks, Router, Context API / Redux), Bootstrap / Tailwind CSS

Koneru Lakshmaiah Education Foundation

(Deemed to be University estd. u/s. 3 of the UGC Act, 1956)

Off-Campus: Bachupally-Gandimaisamma Road, Bowrampet, Hyderabad, Telangana - 500 043.

Phone No: 7815926816, www.klh.edu.in

Backend:

Node.js, Express.js, npm

API Testing:

Postman

Database:

MySQL (optional), LocalStorage

Libraries:

Axios, React Router DOM, Chart.js / Recharts, React Hook Form, Day.js / Moment.js

Development Tools:

VS Code, Git, Chrome DevTools, ESLint, Prettier

Deployment:

Localhost, Vercel / Netlify (optional)
